Introduction

"Jet Airplane Fleets of the World" is a computer printout based on JETTRACK, a computerized jet airplane inventory system kept by the Market Research Department of the Boeing Commercial Airplane Company. Fleet data in JETTRACK are obtained from many sources, including manufacturers, airplane operators, governments, trade publications, and others.

Data in this third edition of "Jet Airplane Fleets of the World" reflect as accurately as possible the status of the world's jet fleets as of December 31, 1979.

General Remarks

The inventory lists include commercial turbojet and turbofan airplanes (and their military derivatives) built in the United States and Western Europe. Equipment built in the U.S.S.R. is not included.

The lists include jet airplane inventories of airlines, corporate and private operators (including business jets), air travel clubs, leasing companies, government agencies, and brokers. Also included are a few used airplanes currently held by airframe manufacturers.

Leased airplanes are usually included in the fleets of the operators. However, airplanes on short-term wet or dry lease are generally shown under the name of the owner rather than the lessee. In the fleet inventory lists, no attempt was made to identify leased equipment. Section 5, however, provides details on airplanes leased out by airlines.

The delivery and inventory lists do not include a small number of completed manufacturer-owned airplanes that were never sold but are occasionally used for leasing.

Operator names in the lists are often abbreviations and may, therefore, vary from official names.

A small number of airplanes included in the lists were not in service at the end of 1979, pending resale or permanent retirement. No attempt was made to identify these airplanes in this publication.

The lists do not contain information on airplanes on order or on option for delivery in 1980 and later years.
